

TasteWiseKids

Make your own plastic planter by filling empty bottles with soil and seeds. A great way to reuse items to grow something new!

LET'S MAKE A
PLANTER

Materials: Plastic bottles, string, scissors, hole puncher, permanent marker or paint, soil, plants or seeds, water.

Steps:

- 1) Decide on your design. Keep it simple or be creative.
- 2) Use a bottle that suits your plant or seeds. For plants that need a deeper root space, use a taller bottle.
- 3) Cut the bottle to size. If you are making a hanging planter, punch 3 holes in the sides to tie the string.
- 4) Cut holes in the bottom of the planter for water drainage.
- 5) Decorate your bottle to taste.
- 6) Fill the bottle with soil, leaving space for your plant or seeds.
- 7) Gently water and place in a sunny window.
